Building and Supporting Open Source Communities Through Metrics: Reviewing OpenInfra Community Metrics

OpenInfra Days 2025

Community Activity **Indicates Health**

Thrive ?

Abandon ?

The community activity today is a leading indicator for the software project's future.

Meet Georg Link

Open Source Strategist

- Business focus
- 20+ years in open source
- Co-Founder of CHAOSS
- Community Builder

“My mission is to improve the health and sustainability of open source.”

Agenda

- Why we need OSS Communities more than ever
- What metrics we can use to understand communities
- How to overcome technical and organizational challenges
- Exploration of OpenInfra's community metrics

Why we need OSS Communities more than ever

94%

of organizations **use open source software** in products or services

Source: TODO Group Survey 2024

- Heartbleed incident
- Struts/Equifax debacle
- Log4j vulnerability
- XZ Utils scare

Research Found the SolarWinds Cyber Attack Cost Affected Companies in Key Sectors

11% of Total Annual Revenue

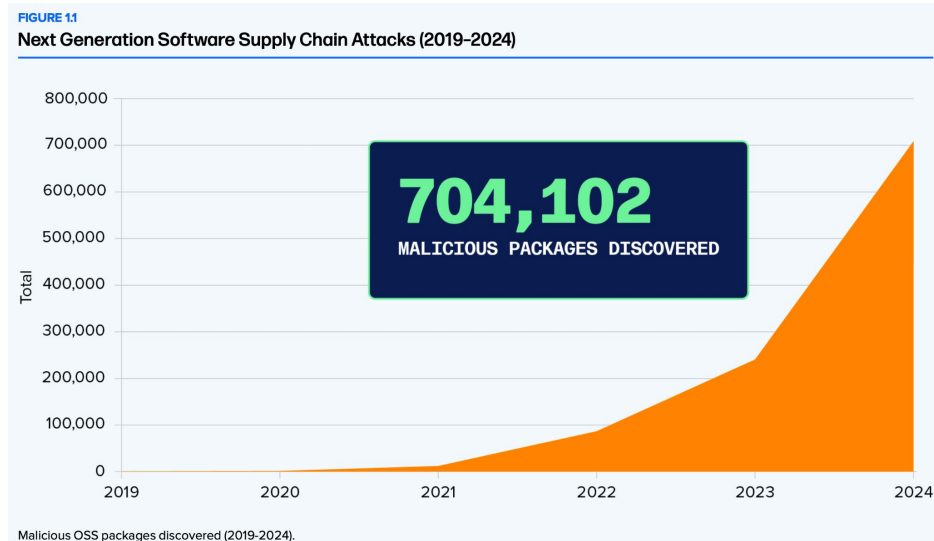

on Average

Results indicate cyber-related information sharing is increasing, signaling a positive response to national-and industry-level calls to action

Software Supply Chain Attacks are on the Rise

Software Supply Chain Attacks are on the Rise

DAMAGE COSTS

Cybersecurity Ventures predicts that the global cost of software supply chain attacks to businesses will reach nearly \$138 billion by 2031, up from \$60 billion in 2025, based on 15 percent year-over-year growth.

Figures in billions of dollars

<https://go.snyk.io/2023-supply-chain-attacks-report.html>

Software Supply Chain Attacks are on the Rise

DAMAGE COSTS

Cybersecurity Ventures predicts that the global cost of software supply chain attacks to businesses will reach nearly \$138 billion by 2031, up from \$60 billion in 2025, based on 15 percent year-over-year growth.

Figures in billions of dollars

<https://go.snyk.io/2023-supply-chain-attacks-report.html>

Gartner predicts that by 2025, **45 percent** of organizations worldwide will have experienced attacks on their software supply chains, a three-fold increase from 2021.

([Gartner, Mar 7, 2022](#))

Dilemma: Maintenance and Sustainability

<https://www.sonatype.com/state-of-the-software-supply-chain>

Sonatype 9th State of Software Supply Chain report:
“Consider this: last year, we revealed that a staggering **85% of projects in Maven Central** – the largest public repository for Java open source components – **are inactive**. In other words, developers are faced with a perplexing array of choices, with only a fraction of them leading to active, well-maintained projects.”

Community Activity **Indicates Health**

The community activity today is a leading indicator for the software project's future.

**What metrics we
can use to
understand
communities**

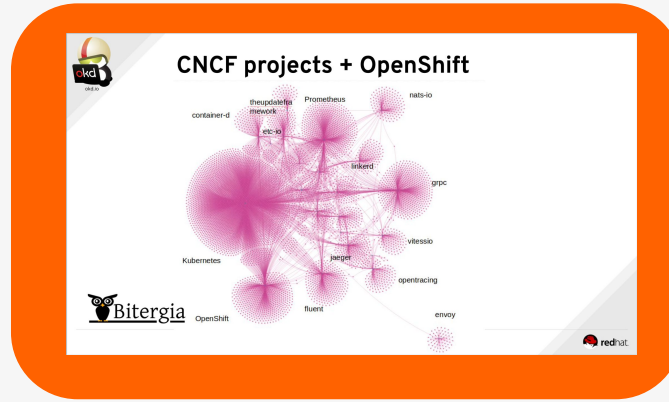

Not all open source projects
have or require communities.

The **Mozilla Foundation** released a
report in 2019 on the **different types** of
open source projects

Bitergia

- More than **15 years** of experience
- Maintains the open source **GrimoireLab** metrics tools
- **Official Metrics Partner** of OpenInfra and Intersect foundations
- Co-founded the **CHAOSS** project in 2017

Metrics community

- **Analytics**
- **Open**
- **Source**
- **Software**

Who is CHA OSS for?

- **Open source contributors** want to know where they should place their efforts and know that they are making an impact.
- **Open source communities** want to attract new members, ensure consistent quality, and reward valuable members.
- **Open source companies** want to know which communities and software to engage with, communicate the impact the organization has on the community, and evaluate the work of their employees within open source.
- **Open source foundations** want to identify and respond to community needs, evaluate the impact of their work, and promote communities.

Why Create CHA OSS?

The CHA OSS community is developing metrics, metrics models, and methodologies implemented in software for expressing open source project health and sustainability to:

- Improve transparency
- Educate maintainers
- Create healthier communities for contributors
- Provide visibility for the four stakeholders

Metrics

Real-World-Examples

Global and Inclusive Community

Building a global and inclusive community requires accommodating timezones, languages, cultures, and other differences.

New Contributors & Contributions

An increase or decline in new contributors and contributions can be an early indicator of community health.

New Contributors

mautic

Attracted Developers

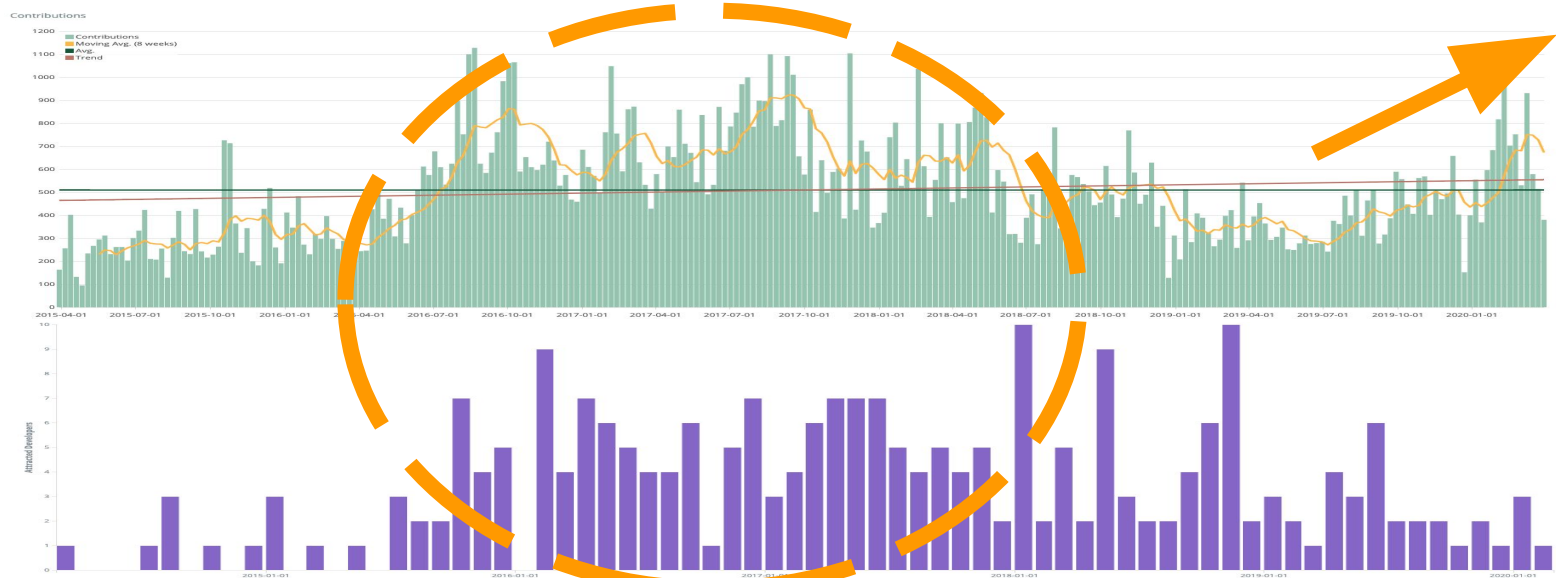

<https://www.mautic.org/blog/community/q1-2020-mautic-community-round>

Growth in overall contributions

mautic

<https://www.mautic.org/blog/community/q1-2020-mautic-community-round>

New Contributors

Attracted Developers

Foundation for community growth

Report Conclusion:

Q1 2020 has been a busy one in the Mautic Community. A lot of positive steps have been taken to **establish a solid foundation for growth.**

Teams are becoming more proactive and **processes are being established** which helps the community to function more effectively.

We have seen, **as a result, a significant increase in engagement** and have welcomed new contributors to the project as a result.

Ecosystem Growth

An ecosystem of projects grows by attracting more

- Project
- Contributors
- Members
- Users

Ecosystem Growth

CLOUD NATIVE
COMPUTING FOUNDATION

CONTRIBUTOR GROWTH

MEMBER, END USER & PROJECT GROWTH

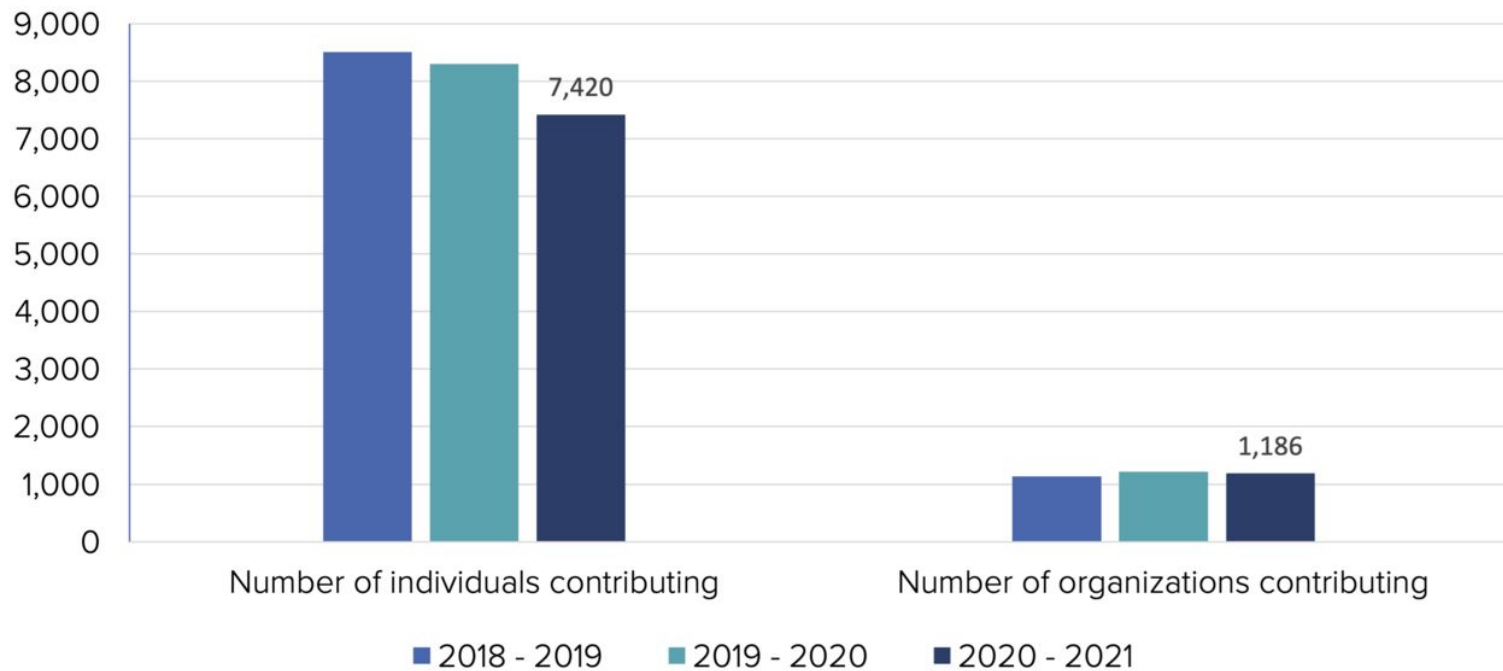

Organizational Diversity

Organizational diversity expresses how many different organizations are involved in a project.

Organizational Diversity

Event Impact

Projects use events to energize and activate contributors.

Event Impact

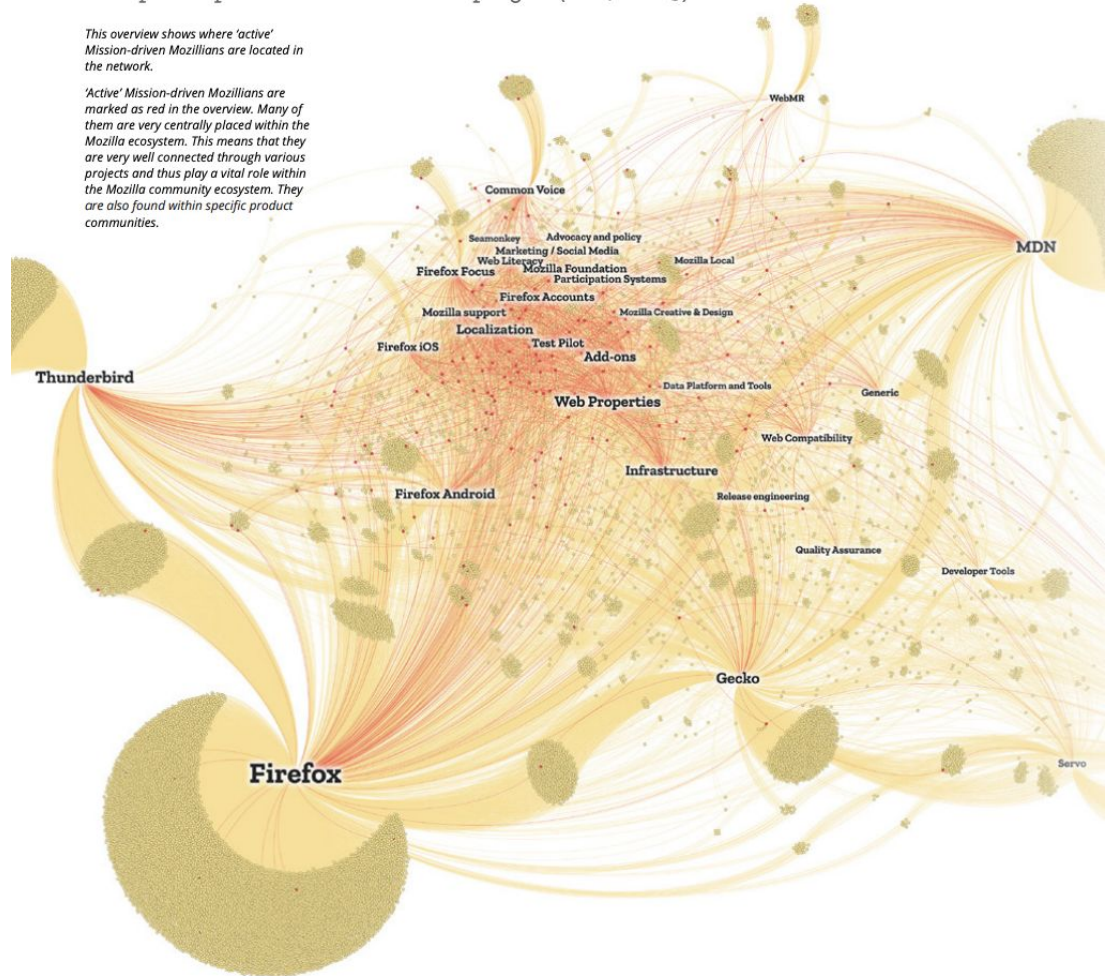

moz://a

<https://report.mozilla.community/>

Network view of contributions from Mission-driven Mozillians who participated in Activate Campaigns (2017-2019)

This overview shows where 'active' Mission-driven Mozillians are located in the network.

'Active' Mission-driven Mozillians are marked as red in the overview. Many of them are very centrally placed within the Mozilla ecosystem. This means that they are very well connected through various projects and thus play a vital role within the Mozilla community ecosystem. They are also found within specific product communities.

How to overcome technical and organizational challenges

Organizational Challenges

- Deciding on the right metrics
- Knowing what to do about metrics
- Knowing what is good and bad
- PII* concerns

*Personally identifiable information (PII) uses data to confirm an individual's identity.

Technical Challenges

Where is the data?

- Git
- GitHub
- GitLab
- BitBucket
- Jira
- Gerrit
- Confluence
- ...

Technical Challenges

Where is the community?

- Wiki
- Discourse
- Mailing List
- IRC
- Slack
- Meetup.com
- StackOverflow
- ...

How to get the data

Raw data:

- Get data from data sources

Enriched data:

- Unify data
- Manage identities
- Calculate metrics

Useful data:

- Visualize, report

Raw data

- Easiest step
- Query logs
- Use APIs

Challenge: Changing APIs and data formats

Enriched data

→ Unify data

- Date formats
- Level of detail
- Metadata about different contributions
- Convert everything into the desired database structure

→ Manage identities

→ Calculate metrics

Enriched data

- Unify data
- **Manage identities**
 - Who is who in the community
 - Who do contributors work for (now and before)
 - Different usernames and email
 - Assigning contributions to the correct person
- Calculate metrics

Enriched data

- Unify data
- Manage identities
- **Calculate metrics**
 - Primary metrics - summarizing original data
 - Secondary metrics
 - Calculation from different data fields
 - Combining data from different data sources
 - Value judgements on data - e.g., quality models

Useful data

- Who is the data user?
- How should the data be presented?
- What visualizations are most meaningful?
- What story does the data tell?

Exploration of OpenInfra's community metrics

OpenInfra and
Bitergia **partner**
in providing metrics
to OpenInfra projects

“Bitergia is the internationally-recognized team of experts in open source metrics. It really makes sense for the OpenInfra Foundation to partner more closely with them as we look towards supporting the next decade of open infrastructure projects. Through this partnership, all OpenInfra projects will have access to pertinent and standard community metrics and insights.”

**– Thierry Carrez,
GM of the OpenInfra Foundation**

“OpenInfra has been long-standing partner. We have been working together on project sustainability and diversity equity and inclusion. I’m super excited that we will work more closely with OpenInfra it grows its projects and foundation.”

**– Georg Link,
Director of Sales at Bitergia**
